EDUCATION

The University of Texas at Arlington
Bachelor of Science, Mechanical Engineering

Aug 2024 - 2028

- **GPA:** 3.0
- **Coursework:** Engineering Design, Thermodynamics I, Engineering Statics, Numerical & Programming Analysis

EXPERIENCE

Keller Center for Advanced Learning
Electric Vehicle Internship- Mechanic

Aug 2023 - May 2024
TX

- Expanded civil engineering and vehicle-building knowledge by helping develop two electric cars throughout the year.
- Organized test runs to analyze weaknesses in the designs of both cars and identify improvements before the racing event.
- Received 1st place honors within our category (Lithium-ion Battery) and 3rd Place overall.
- Worked as part of a 12-person team, distributing tasks based on individual skills while keeping the group focused on project objectives.

Good News Dallas Church

May 2025 - Present
Grand Prairie, Texas

- Good News Dallas Church – Residential & Commercial Renovation*
- Assisted with demolition and renovation, including removing concrete slabs to expose underground plumbing systems, flooring materials, carpets, and interior walls in preparation for remodeling.
 - Installed modern PVC piping improving system reliability, replacing outdated underground KITEC pipes
 - Worked with construction teams to complete assignments safely and meet project deadlines while supporting organized work areas.
 - Contributed to the installation of remodeled flooring for the basketball gymnasium, ensuring structural support and integrity

Premier Soccer Services LLC

Jun 2024 - Present
Spring, Texas

- Premier Soccer Services LLC – Operations Management Internship*
- Managed inventory and logistics for large-scale event equipment, including tents, chairs, tables, water systems, and field infrastructure, ensuring accurate tracking, organization, and availability.
 - Oversaw parking operations and financial tracking, recording transactions and maintaining accurate revenue logs to support event budgeting and reporting.
 - Coordinated end-to-end tournament setup and teardown, including palletizing and transporting equipment between locations to ensure efficient mobilization and execution.
 - Installed and operated live-stream camera systems while serving as Field Marshal, supporting real-time event coverage and maintaining smooth on-field operations

PROJECTS

Electric Go Cart

- Part of a team of 4 that designed and built a go-kart over 6 months, achieving speeds of up to 12 mph with a 30-minute runtime.
- Planned the design by creating assembly drawings in CAD software and modeling components in SolidWorks while keeping the project budget below \$750.
- Made custom parts like control arms, adjusting and shaping components precisely through welding, sanding, and machining
- Resolved issues with rack and pinion system, adjusting components for cart's narrowing shape as well as weight distribution while maintaining key mechanical engineering principles

Autonomous Ball-Catching and Delivery Device

- Designed and built a fully autonomous system to catch a dropped ball and transport it to designated location
- Collaborated with teammates on mechanical designs, 3D CAD models, simulations, and drawings in SolidWorks using VEX components; created product documentation and a project presentation.
- Set device to run at 2 mph for accuracy, achieving 30 seconds of error-free autonomous operation with strong execution.

Computer Skills

- SolidWorks, MATLAB, OnShape, Revit, Civil Engineering

Certifications

- AC & DC Electricity
- TABC License
- Food Handler's License

Languages

- English (Fluent)
- Spanish (Fluent)
